Reference: IDG #77934

The following items were analyzed:

Item Number	Description	Received From	Received On
S185560	Rabbit sex toy	FedEx 7927 0720 2150	4/10/2006
S185561	inside of cover for sex toy	FedEx 7927 0720 2150	4/10/2006

SEMEN DETECTION

Acid Phosphatase Spot test for the Presumptive Presence of Semen:

Item Number	Item Description	Result
S185560	Rabbit sex toy	Negative
S185561	inside of cover for sex toy	Negative

Microscopic Examination for the Presence of Spermatozoa:

Item Number	Item Description	Result
S185560	Rabbit sex toy	Positive
S185561	Inside of cover for sex toy	Inconclusive*

*Microscopy obscured by an abundance of non-sperm cellular material

ABAcard® p30 test for the Presence of Semen:

Item Number	Item Description	Result
S185561	Inside of cover for sex toy	Negative

INTERPRETATION:

The rabbit sex toy [S185560] tested positive for the presence of semen. This item is suitable for further DNA testing.

The inside of cover for sex toy [S185561] tested negative for the presence of semen.

Positive and negative controls were tested and gave correct results.

Thank you for this opportunity to assist you in this matter. Identigene will return all items of evidence to the address provided during the week of June 21, 2006, unless otherwise directed by you. If you have any questions please feel free to call us at 713-798-9510.

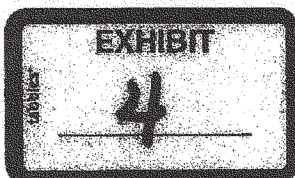

Sincerely,

Mary Thompson

Reference: IDG #77934

The following item was analyzed:

Item Number	Description	Received From	Received On
S185562	Hairs on sex toy and black cover	FedEx 7927 0720 2150	4/10/2006

INTERPRETATION

Microscopic examination of the hair on sex toy - 1 [S185562-1] and hair on sex toy - 4 [S185562-4] revealed the presence of root material identified as anagen/catagen bulb with root sheath. These hairs may be suitable for further nuclear DNA testing.

Microscopic examination of the hair on sex toy - 2 [S185562-2] revealed the presence of root material identified as anagen/catagen bulb without root sheath. This hair may be suitable for further nuclear DNA testing.

Microscopic examination of the hair on sex toy - 3 [S185562-3], hair on black cover - B1 [S185562-B1], hair on black cover - B2 [S185562-B2] and hair on black cover - B3 [S185562-B3] failed to reveal the presence of root material. These hairs are unsuitable for further nuclear DNA testing.

Microscopic examination of the hair on cover - B4 [S185562-B4] revealed the presence of root material identified as telogen with club. This hair is unsuitable for further nuclear DNA testing.

Thank you for this opportunity to assist you in this matter. Identigene will return all items of evidence to the address provided during the week of June 21, 2006, unless otherwise directed by you. If you have any questions please feel free to call us at 713-798-9510.

Re: IDG#77933

The following items were analyzed:

Item Number	Description	Sample Type	Received From	Received On
186321/186322	Rabbit sex toy	Evidence Sample	FedEx 7927 0720 2150	4/10/2006
186142	Buccal swabs labeled "Linda Marie Schuff"	Reference Sample	FedEx 8532 2614 1699	4/7/2006

For the items listed above, DNA was extracted and amplified at fifteen polymorphic PCR loci (D8S1179, D21S11, D7S820, CSF1PO, D3S1358, TH01, D13S317, D16S539, D2S1338, D19S433, vWA, TPOX, D18S51, D5S818, and FGA) and Amelogenin. The DNA profiles of the evidence samples were compared to the DNA profile of the reference sample.

INTERPRETATION

The reference buccal swabs labeled "Linda Marie Schuff" [186142] produced a full female DNA profile.

A full female DNA profile was obtained from the epithelial cell fraction of the rabbit sex toy [186321]. This profile matches the DNA profile obtained from the reference buccal swabs labeled "Linda Marie Schuff" [186142] at all fifteen STR loci tested. Therefore, Linda Marie Schuff cannot be excluded as the DNA donor to the epithelial cell fraction of the rabbit sex toy [186321]. The frequency of this profile from an unrelated individual chosen at random from the population at large is less than 1 in 1.0 x 10¹⁹ in African American, Caucasian, and Hispanic populations (FBI database).

A mixture of DNA from at least two individuals, with a major male component of unknown origin, was obtained from the sperm cell fraction of the rabbit sex toy [186322]. Linda Marie Schuff cannot be excluded as a possible contributor to the minor component of this mixture.

The alleged biological father, the DNA-donor to the major component of the sperm cell fraction of the rabbit sex toy [186322], cannot be excluded as being the biological father of the child, Linda Marie Schuff. Based on the data from the 15 STR loci tested, the Probability of Paternity is 99.9891% and the Combined Paternity Index is 9,100 as compared to an untested randomly chosen man of the African American, Caucasian, and Hispanic populations (Prior Probability = 50%) (FBI database).

Extraction and PCR DNA controls were tested and gave the correct results.

Sample	D8S1179	D21S11	D7S820	CSF1PO	D3S1358	TH01	D13S317	D16S539	D2S1338	D19S433	vWA	TPOX	D18S51	D5S818	FGA	AMEL
186142 Reference buccal swabs labeled "Linda Marie Schuff"	10,11	28,31	8,12	10,11	16,17	6,9,3	11,12	11	17,22	15,17,2	17,18	11	13,17	11,12	21,24	X,X
186321 Epithelial cell fraction of the rabbit sex toy	10,11*	28,31	8,12	10,11	16,17*	6,9,3	11,12*	11*	17,22	15,17,2*	17,18	11	13,17	11,12*	21,24	X,X*
186322 Sperm cell fraction of the rabbit sex toy	10,13 [11]	28,30*	8 [12]	10,14*	14,17 [16]*	9,3 [6]	8,12	11,13	17	13,17,2 [15]	17,18	8,11	12,17*	8,11 [12]	23,24 [21]	X,Y

[] = Minor component of a mixture * = Possible additional alleles below threshold

Thank you for the opportunity to assist you in this matter. Identigene will return all items of evidence to the address provided during the week of July 11, 2006, unless otherwise directed by you. If you have any questions please feel free to call us at 713-798-9510.
